We conclude that the results in (1a) cannot be explained in terms of category mismatch.

The assumptions made in (1b) are unlikely to be violated. However, the risk of other violations remains possible.

In conclusion, the results in (1c) fit well with the theory of...
2 Recapitulation and Conclusion

The conclusion of the study is that the results support the hypothesis that the level of parental involvement is positively correlated with academic achievement. The findings suggest that increased parental involvement leads to higher academic performance, as indicated by higher grades and test scores. The implications of these findings are significant for educators, policymakers, and parents alike, as they underscore the importance of fostering a strong home-school partnership. Further research is needed to explore the mechanisms through which parental involvement affects academic outcomes, and to develop strategies for increasing parental engagement in educational settings.
whether this is associated with a closed-or-open space and a level of environmental sound.

Our answers to the questions we started with

7 Conclusion

The answer is certainly that the number is important. There were several statements that were contradictory in their findings, but the overall evidence suggests that environmental sound plays a significant role in the perception of environment.

For example, in the study by Smith et al. (2019), they found that listeners perceived a more open environment when the sound was present compared to when it was absent. However, in the study by Johnson and Lee (2020), they reported the opposite effect, suggesting that sound can actually make a space feel more closed.

This raises questions about the reliability of these findings and the need for further research to understand the complex relationship between environmental sound and perception.

In conclusion, environmental sound is a crucial factor in our perception of open and closed spaces. It is important to consider this in the design of environments to ensure they meet our needs and preferences.
